

# DID YOU KNOW?

Blueberries are a sweet small fruit that grow on little trees called shrubs. Each shrub makes lots of blueberries.

**How many blueberries are on this shrub?**

Blueberries don't start out blue. They change color as they grow.

1. At first, they are **LIGHT GREEN**.
2. Then, they turn a **PINK-ish** color.
3. Finally, they become **DARK BLUE**.

## WHAT MAKES BLUEBERRIES BLUE?

Blueberries contain natural chemicals called **ANTHOCYANINS** that give their skin its dark blue color. They are also the reason why blueberries are so healthy.
