

# DID YOU KNOW?

Blueberries grow on little trees called shrubs. Each shrub makes many blueberries.

How many blueberries are on this shrub?

\_\_\_\_\_

## WHAT MAKES BLUEBERRIES BLUE?

Blueberries contain natural chemicals called

### **ANTHOCYANINS**

that turn the berries their dark blue color. These special chemicals are good for you and are the main reason why blueberries are so healthy.

Blueberries don't start out blue. They change color as they grow. Color the berries to match the description.

1. At first, they are **LIGHT GREEN**.
2. Then, they turn a **PINK-ish** color.
3. Finally, they become **DARK BLUE**.
